DETAILED ACTION

1. The Response filed on July 6, 2006, has been entered and acknowledged by the Examiner.

Election/Restrictions

2. This application is in condition for allowance except for the presence of claim 3 directed to a discharge beam estimating method, for an optical fusion splicer non-elected without traverse. Accordingly, claim 3 has been cancelled.

EXAMINER'S AMENDMENT

3. The application has been amended as follows:

Claim 4 (Currently Amended). A method for fusion splicing of an optical fiber using an optical fiber fusion splicer comprising a setting means for setting respective end surfaces of two optical fibers that are to be spliced in order to abut against each other, a heating means for generating an arc discharge between two discharge electrodes and heating an abutment portion of said optical fibers using a discharge beam, and an image pickup means for picking up an image of said discharge beam, the method comprising: measuring, from image signals obtained by said image pickup means when a preliminary arc discharge is generated between said discharge electrodes when no optical fibers have been placed in a discharge area, brightness distributions on a plurality of lines that are set at different positions along a rectilinear direction between said discharge electrodes and run in a direction substantially at right angles to the rectilinear direction; estimating a

heating center of the arc discharge along an axial direction of the optical fiber from the plurality of brightness distributions; controlling a position of said setting means along the axial direction of the ~~optional~~ optical fiber such that the abutment portion of said two optical fibers is positioned in the estimated heating center; and thereafter controlling said heating means such that a main arc discharge is generated and said abutment portion is heated by said discharge beam.

Allowable Subject Matter

4. Claims 4 and 5 are allowed.
5. The following is an examiner's statement of reasons for allowance:

Regarding to independent claim 4, prior art of record taken alone or in combination fails to teach or suggest a method for fusion splicing of an optical fiber using an optical fiber fusion splicer comprising: estimating a heat center of the arc discharge along an axial direction of the optical fiber from the plurality of brightness distributions; controlling a position of the setting means along the axial direction of the optical fiber such that the abutment portion of the two optical fibers is positioned in the estimated heating center, in combination with other claimed method of the present claimed invention.

Regarding to claim 5, is allowable because of the dependency upon the allowable independent claim 4.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
